Index Guide
as to
10X Long Index linked to Standard & Poors 500[®] Index
(ISIN CH0252016065)

Bank Vontobel AG

Gotthardstrasse 43

8002 Zurich

Switzerland

This Index Guide describes the composition and calculation of the *Factor Index* specified below. The *Index Calculation Agent* makes the Index Guide available on the *Information Page*. The Index Guide constitutes the basis for calculating and publishing the *Factor Index*.

Index Name: 10X Long Index linked to Standard & Poors 500® Index (the "**Factor Index**")
Reference Instrument: Standard & Poors 500® Index
Index Calculation Agent: Bank Vontobel AG, Gotthardstrasse 43, 8002 Zurich, Switzerland
Information Page: <https://indices.vontobel.com>
ISIN: CH0252016065
Valor: 25201606

This Index is part of the family of Vontobel Leveraged Long and Short indices ("**Factor Indices**").

The Factor Indices are not recognized financial indices but are customized indices conceived by Bank Vontobel AG in its capacity as Index Calculation Agent, their sole function being to act as underlying for this type of security (Factor Certificates).

The Index Calculation Agent will perform the calculation and composition of the Factor Index with the utmost care. However, the Index Calculation Agent does not guarantee that the calculation of the indices or of any other parameters required for the composition and calculation, as in accordance with this Index Guide, will be free from error.

Decisions on the manner and method of calculation and composition of its indices are made by the Index Calculation Agent in good faith and based on its best knowledge available. The Index Calculation Agent is neither liable for any damages nor any losses resulting from or associated with the said decisions.

The Index Calculation Agent accepts no liability whatsoever towards third parties for associated direct or indirect damages, resulting from or associated with an inaccurate or erroneous calculation of the indices or any other parameters. Without prejudice to any potential obligations vis-à-vis licensees, the Index Calculation Agent is under no obligation towards third parties, including investors and/or financial intermediaries, to indicate any mistakes or errors related to the Index.

The indices of the Index Calculation Agent do not constitute a recommendation to undertake an investment. In particular, the composition, calculation and publication of the indices are neither to constitute a representation or a warranty nor an opinion on the part of the Index Calculation Agent with regard to the purchase or sale of an index constituents or any financial instrument relating to such index.

The Index and the index family constitute the intellectual property of Bank Vontobel AG, Gotthardstrasse 43, 8002 Zurich, Switzerland, which reserves any and all rights in this respect.

The original version of the Index Guide is in German; foreign-language versions constitute non-binding translations.

A) Index description

The *Factor Index* reflects price movements of the *Reference Instrument* to a factor of 10. A rise in the price of the *Reference Instrument* since the most recent calculation of an *Index Closing Value* results in a positive change of the *Factor Index* as compared to the previous price of the *Factor Index* and vice-versa. The *Factor Index* therefore reflects a "long" strategy.

The *Factor Index* consists of a leverage component and a financing component.

Leverage component

The leverage component tracks an investment in the *Reference Instrument* (or constituents thereof and in accordance with its rules and regulations), whereby movements in the price of the *Reference Instrument* are multiplied by the (Leverage) *Factor*. This leverage effect occurs with either positive or negative movements in the price of the *Reference Instrument*, having a disproportionate effect on the value of the *Factor Index*.

For example (leaving aside the financing component):

- An increase in the price of the *Reference Instrument* (as compared to the most recent adjustment) by 2% results in an increase in the *Factor Index* by $10 \times 2\%$;
- a decrease in the price of the *Reference Instrument* (as compared to the most recent adjustment) by 2% results in a decrease in the *Factor Index* by $10 \times 2\%$.

Financing component

The financing component tracks the capital costs incurred to finance the corresponding investment in the *Reference Instrument* (or constituents thereof). Additionally, a fee charged by the *Index Calculation Agent* for the calculation and administration of the *Factor Index* is added (*Index Fee*).

The financing component therefore reduces the value of the *Factor Index*.

B) Index definitions

The definitions below shall apply for the purposes of this index description.

"**Adjustment Day**" is the first *Index Calculation Day* of each calendar month.

"**Extraordinary Adjustment Event**" is any of the following events as they relate to the *Reference Instrument*:

- (a) Change, adjustment or other measure affecting the relevant concept and calculation of the *Reference Instrument*, resulting, in the opinion of the *Index Calculation Agent* in the relevant concept or calculation of the *Reference Instrument* no longer being comparable to those as at the *Index Start Day*. These factors are no longer comparable if, in particular, a change, adjustment or other measure results in a material change in the *Reference Instrument* despite the fact that the prices of the individual securities included in the *Reference Instrument* and their weighting remain the same;
- (b) Cancellation of the *Reference Instrument* and/or replacement by a different index concept; or
- (c) any other event which the *Index Calculation Agent* may at its reasonable discretion deem to have a comparable or similar impact on the calculation of the *Factor Index* in the event no adjustment were made.

"Valuation Price" of the *Reference Instrument* for an *Index Calculation Day* is – subject to an *Extraordinary Adjustment* to the calculation of the index in accordance with section D) – the closing price of the *Reference Instrument*, as determined and published for that day by the *Reference Exchange*. If an *Index Calculation Day* falls on a day which is not a *Trading Day*, the *Valuation Price* of the immediately preceding *Index Calculation Day* shall continue to apply. If no *Valuation Price* for the *Reference Instrument* is determined or published on a *Trading Day*, the *Index Calculation Agent* shall determine the *Valuation Price* of the *Reference Instrument* for that day on the basis of the most recent prices set for the *Reference Instrument* at its due discretion.

"Dividend Method" is either *individual* or *flattened* (as described below).

In case of the **"individual"** *Dividend Method* the distributions of the constituents of the *Reference Instrument* are taken into account individually for the index calculation. The **"Dividend"** relevant for the index calculation according to section C) corresponds to the dividend of the company, exclusive of which a constituent of the *Reference Instrument* is traded on the *Ex-dividend Day* on the *Trading Facility* which is – according to the *Reference Exchange's* concept – relevant for the calculation of the *Reference Instrument* (**"Trading Facility"**). The *Index Calculation Agent* thereby takes into account the respective constituent's weight in the *Reference Instrument*. **"Ex-dividend Day"** is the *Index Calculation Day* on which the respective constituent of the *Reference Instrument* trades "ex-dividend" on the *Trading Facility* for the first time.

The **"flattened"** *Dividend Method* means that the distributions of the constituents of the *Reference Instrument* are not taken into account individually for the index calculation. Instead, they are considered by means of a flattened amount which is taken into account for the index calculation continuously. Therefore, with this *Dividend Method* the **"Dividend"** relevant for the index calculation according to section C) corresponds to an amount which is determined by the *Index Calculation Agent* at its due discretion to take into account the expected distributions of the *Reference Instrument's* constituents pro rata on each *Index Calculation Day* for the index calculation. In the course of this, the *Index Calculation Agent* considers in particular its expectations regarding the distributions of the *Reference Instrument's* constituents for the next, up to three, months following each *Index Calculation Day*. The *Index Calculation Agent* may adjust such *Dividend* at its due discretion on any *Index Calculation Day*, in particular in case of modified dividend expectations.

On the *Index Start Day* the individual *Dividend Method* is applicable. The *Index Calculation Agent* may change the *Dividend Method* at its due discretion on each *Adjustment Day*. The changed *Dividend Method* is applicable immediately on that respective *Adjustment Day*. Such a change of the *Dividend Method* is published by the *Index Calculation Agent* in accordance with section E).

"Dividend Tax Factor" shall be 1.0 on the *Index Start Day*. The *Index Calculation Agent* may change the *Dividend Tax Factor* at its due discretion on any *Index Calculation Day* with prospective effect if the relevant tax law applicable to the *Index Calculation Agent* changes, resulting in a change in the amount of the – after tax – *Dividend* virtually accruing to it.

"Financing Spread" represents (in the form of a premium over the relevant *Interest Rate*) the financing costs which may be incurred when financing through debt the long strategy tracked by the *Factor Index*.

The *Financing Spread* on the *Index Start Day* corresponds to the *Initial Financing Spread*. The *Index Calculation Agent* then adjusts the **"Current Financing Spread"** at its due discretion on each *Adjustment Day* to reflect current market conditions and publishes it in accordance with section E) of this index description. The adjusted *Financing Spread* becomes applicable beginning immediately on each *Adjustment Day*.

"Initial Financing Spread" is 0.1% per annum.

"Trading Day" is any day on which the *Reference Instrument* is calculated by the *Reference Exchange*.

"**Factor**" is 10. It describes the impact that a change in the price of the *Reference Instrument* has on the relevant *Factor Index*.

"**Index Calculation Agent**" is Bank Vontobel AG, Gotthardstrasse 43, 8002 Zurich, Switzerland

"**Index Calculation Day**" is every day from Monday to Friday.

"**Index Fee**" is 1.0% per annum. The *Index Fee* is charged each calendar day, beginning on the *Index Start Day*. It is calculated on the basis of a 360-day year and the most recently calculated *Index Closing Value*.

"**Index Closing Value**" is calculated each *Index Calculation Day* by the *Index Calculation Agent* in accordance with section C) 1) of this index description on the basis of the *Valuation Price* of the *Reference Instrument* for this *Index Calculation Day* and published in accordance with section E) of this index description.

"**Index Start Day**" is 18 August 2014.

"**Index Start Value**" is 100 points and represents the *Index Closing Value* on the Index Calculation Day T=0 for purposes of index calculation in accordance with C).

"**Index Currency**" is USD.

"**Information Page**" is <https://indices.vontobel.com>.

"**Reference Instrument Price**" corresponds at any time during the calculation periods for the *Reference Instrument* to the price of the *Reference Instrument*, as calculated by the *Reference Exchange* and set by the *Index Calculation Agent*.

"**Reference Exchange**" is S&P Dow Jones Indices LLC.

"**Reference Instrument**" is Standard & Poors 500® Index.

Index type:	Price Index
Currency:	USD
ISIN:	US78378X1072
Bloomberg symbol:	SPX Index

"**Barrier**" amounts to 8%. It represents the maximum allowable negative change in the price of the *Reference Instrument* as compared to its most recent *Valuation Price*, before an *Intraday Index Adjustment* is made.

"**Futures Exchange**" is Chicago Board Options Exchange.

"**Interest Rate**" is USD LIBOR O/N (overnight).

LIBOR stands for London InterBank Offered Rate. LIBOR is an average of submissions from LIBOR contributor banks. Contributor banks submit quotes at which they can obtain unsecured funding in the London interbank market for a given period, in a given currency. Every ICE LIBOR rate is calculated using a trimmed arithmetic mean. Once each submission is received, they are ranked in descending order and then the highest and lowest 25% of submissions are excluded. LIBOR is produced for five currencies with seven maturities. LIBOR interest rates (ICE LIBOR) are administered by ICE Benchmark Administration Limited (IBA) and determined on each business day at 11 am (London time). LIBOR O/N (overnight) stands for maturities of 1 day.

If the *Interest Rate* is neither set nor published on an *Index Calculation Day*, the *Interest Rate* used on the immediately preceding *Index Calculation Day* to calculate the Index in accordance with section C) is used.

If the *Interest Rate* is not set or published for ten consecutive *Index Calculation Days*, the *Index Calculation Agent* has the right and obligation to stipulate at its due discretion a different relevant *Interest Rate* which functions similarly to the previous *Interest Rate*.

C) Index calculation

The *Factor Index* will be calculated for the first time on the *Index Start Day*. The initial Index value on the *Index Start Day* corresponds to the *Index Start Value*. For the period during which the *Reference Instrument* is traded on the *Reference Exchange*, the relevant current index level is calculated on a continuing basis on each *Index Calculation Day* by the *Index Calculation Agent*; it is rounded to two decimal points and published in accordance with section E).

One index point corresponds to one unit of the *Index Currency*.

C) 1) Index formula

The *Factor Index* is calculated for each time t during an *Index Calculation Day* T in accordance with the following formula:

$$IDX_t = IDX_{T-1} \times \left\{ \underbrace{1 + L \times \left(\frac{R_t + divf \times div}{R_{T-1}} - 1 \right)}_{\text{leverage component}} - \underbrace{[(L-1) \times (IR_{T-1} + FS_T) + IG] \times \frac{d}{360}}_{\text{financing component}} \right\}$$

where:

- T = current Index Calculation Day
- IDX_t = Index Value at time t on Index Calculation Day T
- IDX_{T-1} = Index Closing Value on Index Calculation Day T-1 which immediately precedes the current Index Calculation Day
- L = Factor: 10
- R_t = Reference Instrument Price at time t
- R_{T-1} = Valuation Price on Index Calculation Day T-1
- divf = Dividend Tax Factor
- div = Dividend on Index Calculation Day T. In case of the individual Dividend Method this amount is 0, except on the Ex-dividend Day
- IR_{T-1} = Interest Rate on Index Calculation Day T-1
- FS_T = Financing Spread on Index Calculation Day T
- IG = Index Fee
- d = Number of calendar days between Index Calculation Days T-1 and T

C) 2) Intraday Index Adjustment

If at time s on *Index Calculation Day* T the *Reference Instrument Price* (plus any *Dividend* multiplied by the *Dividend Tax Factor*: $R_s + divf \times div$) falls below the most recent *Valuation Price* of the *Reference Instrument* by more than 8% (*Barrier*), an "**Intraday Index Adjustment**" takes place, simulating a new day:

- s = T, i.e. $IDX_{T-1} \text{ (new)} = IDX_s$
- $R_{T-1} \text{ (new)} = R_{T-1} \text{ (old)} \times 0.92 - divf \times div$
- d = 0

A new *Valuation Price* valid after time s (R_{T-1} (new)) is calculated, whereby the previous *Valuation Price* (R_{T-1} (old)) is multiplied by 0.92.

In addition, the net dividend will be deducted (in case of the *individual Dividend Method* only if the *Index Calculation Day T* is an *Ex-dividend Day*). *Dividend* and *Dividend Tax Factor* will not be considered in the index calculation in section C) 1) on the newly simulated *Index Calculation Day*.

The *financing component* remains unchanged. No additional interest or costs are incurred for the newly simulated day.

D) Extraordinary Adjustment to Index Calculation

In the event of an *Extraordinary Adjustment Event* occurring in relation to the *Reference Instrument*, the *Index Calculation Agent* will adjust the index calculation on the *Reference Date* (as defined below). The *Index Calculation Agent* will – to the extent possible – endeavor to calculate the *leverage component* as if no *Extraordinary Adjustment Event* had occurred.

The *Index Calculation Agent* will generally modify the index calculation by correcting at its due discretion the relevant *Valuation Price* for the *Reference Instrument* on *Index Calculation Day T-1* on the *Reference Date*, in order to factor into the index calculation the adjustments made on the *Futures Exchange* for futures and options linked to the *Reference Instrument* traded there.

The *Index Calculation Agent* may adjust the index calculation in some other manner if it deems such adjustment necessary in its due discretion in order to account for differences between this Index and the futures and options traded on the *Futures Exchange*. Such adjustments may in particular relate to the stipulation of a different *Reference Exchange*, *Futures Exchange* or *Reference Instrument Price*.

The list of *Extraordinary Adjustment Events* listed in section B) is not exhaustive. The deciding factor is whether the *Futures Exchange* considers it expedient to adjust the contract size, an underlying or involving the relevant *Reference Exchange* which determines the price of the *Reference Instrument*. If neither futures nor options linked to the *Reference Instrument* are traded on the *Futures Exchange*, the adjustment shall be made in such a manner in which the *Futures Exchange* would do so if corresponding futures or options were traded there. If doubts arise in this event relating to the application of the modification rules of the *Futures Exchange*, the *Index Calculation Agent* shall decide such questions in its reasonable discretion. The rules and regulations of the *Futures Exchange* shall apply in addition to the provisions set out above.

If the *Reference Instrument* (Index) is removed or replaced by a different index concept, or if the license agreement between the *Reference Exchange* and the *Index Calculation Agent* cannot be renewed, the *Index Calculation Agent* determines – where appropriate by applying an adjusted *Reference Instrument Price* for the *Reference Instrument* at time t (R_t) – whether and which different index concept will be used in the future as a basis for calculating the *Factor Index*.

If the *Reference Instrument* is no longer calculated and determined and/or published by the *Reference Exchange* but by another person, company or institution that the *Index Calculation Agent* in its reasonable discretion considers to be suitable ("**Substitute Reference Exchange**"), then the *Factor Index* shall be calculated where applicable on the basis of the *Reference Instrument* calculated and published by the *Substitute Reference Exchange*. All references to the *Reference Exchange* contained in this index description shall be deemed to refer analogously to the *Substitute Reference Exchange*.

If in the opinion of the *Index Calculation Agent* it is not possible, for whatever reason, to stipulate a different relevant index concept, the *leverage component* shall remain unchanged and the index level shall be determined solely on the basis of the remaining components of the index formula.

"**Reference Date**" within the meaning of this index description is the first *Index Calculation Day*, on which the relevant futures or options are or would be traded on the *Futures Exchange* by taking into account the

adjustment on the *Futures Exchange*, if corresponding futures or options would be traded on the *Futures Exchange*.

Adjustments to the *Factor Index* and all further measures set forth in this section will be announced by the *Index Calculation Agent* in accordance with section E).

E) Announcements

All announcements pertaining to the *Factor Index* will be published on the *Information Page*. Such announcements shall be deemed to have been given on the date on which they are first published.

Announcements are made purely for informational purposes and do not represent a precondition for legal effectiveness.
